Appendix 2 Templates for Stressor Analyses

Human Health

Risk Assessment Framework Fin	dings
Hazard Identification	
stressor	
description of stressor (including etiology)	
stressor-specific impacts considered including key impacts	
Exposure Assessment	
exposure routes and pathways considered (include indoor air as appropriate)	
population(s)/ecosystem(s) exposed statewide	
quantification of exposure levels statewide, including populations at significantly increased exposure (include indoor air as separate category as appropriate)	
specific population(s) at increased risk	
quantification of exposure levels to population(s) at increased risk (i.e., susceptible sub-populations) (include indoor air as separate category as appropriate)	
Dose/Impact-Response Assessment	
quantitative dose/impact-assessment employed for each population considered	
Risk Characterization	
risk estimate(s) by population at risk including probability and number of cases/occurrences (specify risk metric employed, e.g., mean population risk upper percentile population risk, etc.)	
assessment of severity, persistence, irreversibility, frequency of effect(s) (categories as appropriate)	
size of population(s) affected	
assessment of uncertainties in this assessment (H,M,L) and brief description, and data gaps	
potential for additional data to result in a significant future change in this risk estimate (H,M,L) and brief description	
potential for future changes in the underlying risk from this stressor (+++, ++, +, 0, ?=,? where + is improvement)	
potential impact from catastrophic (low probability) events (H,M,L) and brief description of likelihood	

potential impact from catast	rophic (low probability)		· · · · · · · · · · · · · · · · · · ·
events (H,M,L) and brief de			
extent to which risks are currently reduced through in- place regulations and controls			
Relative Contributions of Sources to Risk (H,M,L)			
Allocation of stressor-specifications sources	fic risk to primary NJ		
large business/industry			
small business industry			
transportation			
residential			
agriculture			
recreation			
resource extraction			
government			
natural sources			
contaminated sites			
diffuse and non-NJ sources			
sediment			
soil			
non-local air sources (includ	ding deposition)		
biota sinks			
Severity of specified health effects at current levels of exposure (H,M,L) (also 1-5 with 1 being least severe)	Size of population at significant risk for each health effect (H,M,L) (also 1-5 with 1 being smallest)	Are there discrete communities at elevated risk? (Y,N) (also 1-5 with 1 being the lowest probability that there are discrete communities at elevated risk)	Overall risk ranking (as a function of severity and population effected integrating across health effect) (H,M,L) (also 1-5 with 1 being the lowest overall risk)

Ecological Template

Issue: Author: Version:

Hazard Identification	
Stressor	
Description of stressor	
Stressor-specific impacts considered: Biological integrity Biodiversity Habitat/ecosystem health Ecosystem function Key impacts selected (critical ecological effects)	
Exposure Assessment	
Exposure routes and pathways considered	
Population(s)/ecosystem(s) exposed statewide	
Quantification of exposure levels statewide	
Specific population(s) at increased risk	
Quantification of exposure levels to population(s) at increased risk	
Dose/Impact-Response Assessment	
Quantitative impact-assessment employed	
Risk Characterization	
Risk Characterization Risk estimate(s) by population at risk	
Risk estimate(s) by population at risk Risk Score = (Severity/Irreversibility) x (Frequency) x (Magnitude)	Score
Risk estimate(s) by population at risk Risk Score = (Severity/Irreversibility) x (Frequency) x (Magnitude) Assessment of severity/irreversibility 5 - Lifeless ecosystems or fundamental change; Irreversible 4 - Serious damage: • many species threatened/endangered • major community change • extensive loss of habitats/species Long time for recovery 3 - Adverse affect on structure and function of system: • all habitats intact and functioning • population abundance and distributions reduced Short time for recovery 2 - Ecosystem exposed but structure and function hardly affected 1 - No detectable exposure	Score
Risk score = (Severity/Irreversibility) x (Frequency) x (Magnitude) Assessment of severity/irreversibility 5 - Lifeless ecosystems or fundamental change; Irreversible 4 - Serious damage: • many species threatened/endangered • major community change • extensive loss of habitats/species Long time for recovery 3 - Adverse affect on structure and function of system: • all habitats intact and functioning • population abundance and distributions reduced Short time for recovery 2 - Ecosystem exposed but structure and function hardly affected 1 - No detectable exposure Assessment of frequency of effect(s) (list definition for each category, e.g., rare = 1/decade)	Score
Risk estimate(s) by population at risk Risk Score = (Severity/Irreversibility) x (Frequency) x (Magnitude) Assessment of severity/irreversibility 5 - Lifeless ecosystems or fundamental change; Irreversible 4 - Serious damage: • many species threatened/endangered • major community change • extensive loss of habitats/species Long time for recovery 3 - Adverse affect on structure and function of system: • all habitats intact and functioning • population abundance and distributions reduced Short time for recovery 2 - Ecosystem exposed but structure and function hardly affected 1 - No detectable exposure Assessment of frequency of effect(s) (list definition for each category, e.g., rare = 1/decade)	Score
Risk estimate(s) by population at risk Risk Score = (Severity/Irreversibility) x (Frequency) x (Magnitude) Assessment of severity/irreversibility 5 - Lifeless ecosystems or fundamental change; Irreversible 4 - Serious damage: • many species threatened/endangered • major community change • extensive loss of habitats/species Long time for recovery 3 - Adverse affect on structure and function of system: • all habitats intact and functioning • population abundance and distributions reduced Short time for recovery 2 - Ecosystem exposed but structure and function hardly affected 1 - No detectable exposure Assessment of frequency of effect(s) (list definition for each category, e.g., rare = 1/decade) 5 - Often and increasing 4 - Often and continuing	Score
Risk estimate(s) by population at risk Risk Score = (Severity/Irreversibility) x (Frequency) x (Magnitude) Assessment of severity/irreversibility 5 - Lifeless ecosystems or fundamental change; Irreversible 4 - Serious damage: • many species threatened/endangered • major community change • extensive loss of habitats/species Long time for recovery 3 - Adverse affect on structure and function of system: • all habitats intact and functioning • population abundance and distributions reduced Short time for recovery 2 - Ecosystem exposed but structure and function hardly affected 1 - No detectable exposure Assessment of frequency of effect(s) (list definition for each category, e.g., rare = 1/decade) 5 - Often and increasing 4 - Often and continuing 3 - Occasional	Score
Risk estimate(s) by population at risk Risk Score = (Severity/Irreversibility) x (Frequency) x (Magnitude) Assessment of severity/irreversibility 5 - Lifeless ecosystems or fundamental change; Irreversible 4 - Serious damage: • many species threatened/endangered • major community change • extensive loss of habitats/species Long time for recovery 3 - Adverse affect on structure and function of system: • all habitats intact and functioning • population abundance and distributions reduced Short time for recovery 2 - Ecosystem exposed but structure and function hardly affected 1 - No detectable exposure Assessment of frequency of effect(s) (list definition for each category, e.g., rare = 1/decade) 5 - Often and increasing 4 - Often and continuing 3 - Occasional 2 - Rare	Score
Risk estimate(s) by population at risk Risk Score = (Severity/Irreversibility) x (Frequency) x (Magnitude) Assessment of severity/irreversibility 5 - Lifeless ecosystems or fundamental change; Irreversible 4 - Serious damage: • many species threatened/endangered • major community change • extensive loss of habitats/species Long time for recovery 3 - Adverse affect on structure and function of system: • all habitats intact and functioning • population abundance and distributions reduced Short time for recovery 2 - Ecosystem exposed but structure and function hardly affected 1 - No detectable exposure Assessment of frequency of effect(s) (list definition for each category, e.g., rare = 1/decade) 5 - Often and increasing 4 - Often and continuing 3 - Occasional	Score

Assessment of frequency of effect(s) (list definition for each category, e.g., rare = 1/decade)		
5 - Often and increasing		
4 - Often and continuing		
3 – Occasional		
2 – Rare		
1 - Possible in the future		
0 – Unlikely (or 0.1)		
Size of population(s) and/or extent of the State/habitat affected (magnitude)		
5->50% of the State/population impacted		
4- 25-50% of the State/population impacted		
3- 10-25% of the State/population impacted		
2-5-10% of the State/population impacted		
1- <5% of the State/population impacted		
	Total	
Assessment of uncertainties in this assessment (H,M,L) and brief description		
Potential for additional data to result in a significant future change in this risk estimate (H, M, L) and brief description. (Data Gaps; highlight significant data needs)		
Potential for future changes in the underlying risk from this stressor		
$(+++, ++, +, 0, -, =, \equiv;$ where + is improvement), and brief description.		
Potential for catastrophic impacts (H,M,L) and brief description		A
Link to other Work Groups (e.g., socioeconomic impacts)		
Extent to which threat is currently regulated or otherwise managed		
Barriers to restoration		
Relative Contributions of Sources to Risk (H,M,L); include any information/details on sources		
NJ Primary Sources		
Large business/industry		
Small business industry		
Transportation
